PROFESSIONAL SUMMARY

Results-driven fresh graduate (BS Information Technology, Hons) with hands-on experience in Java backend development, RESTful web services, and relational databases (MySQL, PostgreSQL, SQL Server). Solid grounding in OOP principles, the full SDLC, and data structures & algorithms, reinforced by practical, employer-designed simulations covering REST API design, unit testing, and code review/bug root-cause analysis. Comfortable working with Git and collaborating in agile, multi-national team settings. Seeking to join a dynamic Java development team to build reliable, well-tested backend systems for large-scale IT projects.

TECHNICAL SKILLS

- Languages: Java (Core, Spring, JavaFX), SQL, JavaScript, Python, C#, PHP
- Frameworks: Spring Framework (Core, JDBC, ORM, Spring Boot), Hibernate ORM
- Databases: MySQL, PostgreSQL, SQL Server, JDBC — schema design, queries, transactions
- Web Dev: RESTful API design, HTML5, CSS3, JavaScript, Responsive Web Design
- Practices: OOP, Design Patterns, Data Structures & Algorithms, SDLC, Agile, Unit Testing, Exception Handling, Multithreading
- Tools: Git, IntelliJ IDEA, Eclipse, NetBeans, Maven-familiar build workflows
- Languages Spoken: Urdu (Fluent), Sindhi (Fluent), English (Intermediate)

CERTIFICATIONS & JOB SIMULATIONS

Software Development Job Simulation

Aug 2026

Datacom, via Forage

- Completed practical tasks in software review and in identifying and fixing the root causes of bugs, working through realistic code review scenarios.
- Skills gained: Structured code review technique (readability, correctness, edge cases); root-cause debugging rather than symptom patching; documenting review feedback clearly for a team — habits that support writing maintainable, review-ready Java code.

Java Programming Language Certification

Apr 2024 – May 2024

NAVTC — National Vocational & Technical Training Commission, Pakistan

- Completed an intensive 2-month, hands-on Java training program covering Core Java, OOP, Data Structures & Algorithms, Multithreading, and JDBC.
- Skills gained: Strong Core Java fundamentals and OOP design; building and querying database-backed applications via JDBC; capstone builds of a Library Management System and a Student Management System, applying these concepts end-to-end.

WORK EXPERIENCE

Android Developer Intern

Jan 2026 – Feb 2026

Internee.pk — Remote

- Designed and developed a Mobile Payment & Subscription System, implementing secure transaction flows, payment gateway integration, and subscription lifecycle management with real-time status updates.
- Built a Real-Time Communication Platform featuring live messaging and notification functionality.
- Collaborated in a team environment following Agile development practices and SDLC principles across a 2-month engagement.

- Gained practical experience in application architecture, API integration, and debugging — transferable directly to backend service development and integration work.

PROJECTS

LinkedIn AI Auto Apply Agent

Final Year Project — Team Lead

- Led a team to architect and build an AI-powered automation agent that intelligently applies to LinkedIn job postings based on user profiles and job criteria.
- Owned the full SDLC — requirements gathering, system design, development, testing, and deployment — and strengthened leadership, task delegation, and agile collaboration skills while directing a multi-person team, mirroring the collaborative, multi-national project delivery this role calls for.

Library Management System

Java, Spring ORM, Hibernate, MySQL

- Built a full-featured library system with book cataloguing, member management, fine calculation, and an ORM-based data access layer using Hibernate over a MySQL backend.
- Directly exercised Spring/Hibernate ORM mapping, transactional data access, and relational schema design — the core stack this role is hiring for.

Banking Management System

Java, JDBC, MySQL

- Built a banking simulation supporting account creation, fund transfers, and transaction history, with exception handling for invalid operations.
- Applied JDBC directly against MySQL to manage transactional integrity and error handling in a multi-step financial workflow.

EShop Management System

Java, JavaFX, MySQL

- Implemented an e-commerce desktop application with inventory management, a shopping cart, and order-processing modules backed by a relational database.

University Admission System

Java, MySQL

- Developed a desktop application to manage student admissions, with form validation, database persistence, and role-based access control.

Mobile Payment & Subscription System

Android, Java

- Developed during the Internee.pk internship; handled payment gateway integration and subscription billing with real-time status updates.

EDUCATION

Bachelor of Science in Information Technology (Hons)

2022 – 2025

University of Sindh, Jamshoro — Jamshoro, Pakistan

- Relevant coursework: OOP, Data Structures & Algorithms, Database Management Systems, Software Engineering, Web Development, Computer Networks.

Intermediate — Pre-Engineering

2020 – 2021

Govt. Degree College Qasimabad — Karachi, Pakistan
